

Installation Instructions for 2 Piece Colour or Shadow Effect Stickers

These stickers are 3 pieces attached as one. 1.The top clear layer is the application tape.
2.The middle of the sticker is the actual sticker. 3.The white backing paper is at the back of these stickers.

Before Getting started please make sure your surface is clean from oil, grime, polish, soap etc. Once your surface is clean wash again with warm soapy water then rinse with clean water. (Please Note: If sticking these on to boats that have clinker sides over the ridges etc its best to hinge the top rather than the middle working downwards up and into the ridges.)

The glue of the sticker is waterproof and the sticker will not loose any tackiness once completely dry and cured.

THESE CAN BE APPLIED WET OR DRY

Please Note: Do not spray high pressure water over stickers because the stickers may get damaged.

The stickers will also need 7 days for these to fully adhere and cure to the surface. Don't prick any bubbles (which is trapped oxygen) as these will flatten slowly & automatically when the surface is in the sun and may take 1-3 months.

Wet Method - Spray the surface area with clean water only (make sure you spray over the width and height of the stickers).

Turn the stickers upside down on a clean flat surface eg on a clean table. Remove the backing paper and now spray the sticky side of the stickers with a fine mist of water. If the stickers are too wide you may need another person to help you. Now just apply onto your surface, slide into position then apply with an applicator or credit card size plastic card. You have about 50 seconds to position the stickers in place. Next apply with an applicator and wait for about 30 minutes before removing the application tape. When its time remove the application tape slowly. Please wait for a few hours or till the next day to apply the second colour. If you apply the second colour within an hour of applying the first please be careful when removing the application tape as you may pull back the first colour since these need some time to adhere and cure to the surface..

DRY Method

Step 1 - Place your stickers on top of each other so the guide shapes are directly on top of each other. *These guide shapes are to be used strictly as a guide only* so you know where the other sticker needs to be placed.

Step 2 - Mask tape in place the first layer of the stickers marked 1st.

Step 3 - Lift back the unmasked piece and peel the white backing paper and clean cut it off with scissors in the middle.

Step 4 - With an applicator or a credit card wrapped in cotton start from the middle and work your way out to the right side and apply the sticker to the surface.

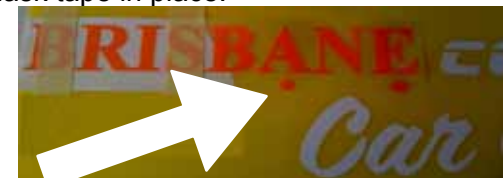

Step 5 - Remove the masking tape and lift back the left hand side & remove the white backing paper. Make sure no backing paper is left on the sticker. To wash any small particles of backing paper wash away with small amounts of water only and repeat step 4 working on the left hand side.

Step 6 - Align the second piece exactly on the first piece until the star shapes are identically above each other. Also check to see if they look right visually and adjust to suit and mask tape in place.

** You could remove the backing paper of the stickers and spray water on the surface of the 1st layer and on to the backing of the second layer and you can guide these ontop of the first layer until the shadow or outline looks perfect then apply these on using an applicator or credit card wrapped in cotton so you can avoide scratching the surface.

Step 7 - Apply the sticker onto the surface & repeat the process from step 2 to 5 then carefully remove the guide shape stickers. With a clean cotton cloth make sure you rub the stickers in place carefully.
